

TAN SPOT

Airbrush Information

Immediately following your Airbrush application

Although an immediate difference in skin tone will be apparent, the color seen is a cosmetic bronzing powder which sits loosely on top of the skin's surface. This bronzing powder will leave temporary unnatural results. This may include discoloration, splotchy, and unevenness. Airbrush results should not be assessed until after this cosmetic powder has been washed off, revealing your own natural tan. Our solution is free of dyes which can produce unnatural color tones, therefore the color of your tan will vary upon your own individual skin type (Olive toned individuals result in darker appearance than those who are fair skinned). Color may appear darker until it is rinsed off, resulting in a lighter appearance after showing.

After your Airbrush session

Your natural tan will develop within six hours after application. Immediate results are cosmetic and will be rinsed off after showering. The following should be avoided for six hours after your Airbrush session:

- Water
- Liquid Based Products
- Oil Based Products
- Moisturizers
- Perspiring

Within the initial six hours suggest using a hand sanitizer to wash palms of hands only, instead of washing hands with water and soap that could interrupt the tanning process.

Keeping that beautiful Tan!

The longevity of your tan depends on the condition of your skin, as well as the elements your skin is exposed to. Naturally dry skin will decrease the longevity of your tan so moisturize often with Prolong lotion and wash gentle moisturizing body wash. We have provided a list of some harsh elements which will decrease the longevity of your tan.

Abrasive Elements:

- Loofa Sponges
- Body Puffs
- Wash Clothes
- Shower Brushes
- Body Scrubs
- Blemish Cleansing Treatments
- Alfa Hydroxy
- Citric Acid
- Chlorine
- Salt Water

Life Style/Apparel:

- Tight Clothing and Shoes
- Sandal Straps
- Watches
- Perspiring Often
